

3-D Measuring Made Easy Training by GLM

Even the best system solutions are useless if no one understands them. Therefore, each 3-D measurement system includes training tailored-made for your needs. In most cases, the software is not used by surveying engineers or technicians. This is not a problem because the software is designed for users who have no prior knowledge of surveying. Depending on the task, it takes only 1-3 days to explain any GLM software package. After the training, every user (foreman, welder, metal worker, etc.) is able to perform a 3-D measurement. Furthermore, training will enable users to interpret and document all results.

GLM Lasermeßtechnik offers training on-site (in production) or at the head office (in Witten). Location usually depends on the task. For further questions please call (+49-2302-20399-50) or send us an e-mail (Ingenieurvermessung@glm-laser.de).
