

GLM Lasermeßtechnik GmbH – Aircraft Construction

Aircraft Construction

Many measuring tasks in the field of aircraft construction can be handled with the [NET05AXII](#) + [3-DIM Observer Motorized](#). For example, our system is used to assemble accessories and sections aligned in the direction of the axis.

Advantages of the [NET05AXII](#) + [3-DIM Observer Motorized](#):

- Easy to use and install, quick setup
- High accuracy
- When using a special target sheet (RT1A), alignment of the instrument is only possible with one known measuring point
- Extended data flow simplifies documentation: Instrument -> Field logger ([3-DIM Observer](#)) -> PC software ([3-DIM PC-Basic](#))-> Other software (e.g. Excel)
- Mobile: The instrument is easily transported to the contractor to measure vendor parts
