

GLM Lasermeßtechnik GmbH – On Site Measurement

On Site Measurement

Since 1991 Gabi has been a surveying service provider for industry and we have successfully face the different challenges. As a specialist for 3D laser measurement we use our very precise and flexible instruments. They can be used as follows:

- Tachymeter
- Lasertracker
- Scanner

We meet the highest requirements for accuracy and mobility. The tasks are as varied as our customers. A small selection:

- Accompaniment of the production of large steel components: Clamping and reclamping in CNC machine. Final inspection.
- Measurement of various rail vehicles for accident reports or maintenance
- Strain measurement of coking plants during the heat-up
- Staking out machine foundations in industrial construction and industrial relocation
- Staking out and alignment of large portal milling machines in aircraft construction

You have a job for us? Just give us a call or send us an e-mail.

We would be pleased to present our system and discuss your project with you
