

GLM Lasermeßtechnik GmbH – Training

3D measurement made simple

Trainings from GLM

Even the best system is useless if nobody understands the handling. For this reason, every 3D measuring system includes a training course customised for the respective application. In most cases the software is not operated by surveyors or surveyors.

The software is designed in such a way that it can be understood quickly even by users without any previous knowledge of surveying technology.

Depending on the task, every GLM software package is explained after 1-3 days. After successful training, every interested user (foreman, welder, metal worker, etc.) can carry out a 3D survey independently. The user is further enabled to interpret and document the results.

GLM offers training courses on site (in your production) or at the headquarters (in Witten).
