

GLM Lasermeßtechnik GmbH – Applications

Mobile 3D Measurement Technology for Industrial Applications

GLM provides mobile 3D measurement technology to accurately log and record measured values (3D-coordinates, tie distances, ...). These are essential for optimal solutions in planning, development, production (manufacturing), quality assurance, and assembly of industrial parts, machinery, equipment, and components. With the software developed by us and the highly accurate portable measurement technology, even very complex industrial measuring and surveying tasks are solved quickly and reliably. We are also successfully active in less common industrial measurement fields (e.g. tradeshow construction, tank volume, ...).
